

MOUNT CARMEL INTERNATIONAL SCHOOL, AKOLA

Cambridge International

Term End Exam - II

Subject: English

Date: 06.04.2024

Student's Name: _____ Roll No: _____ Grade: 6

Marks: 35

Time Duration: 90 minutes

Invigilator's Sign.

Section I- Non-Fiction

Q.1.a. Read the text Climate Change Warning. Then answer questions 1–3.

(The extract is given in a separate page.)

1. What type of report is it and who is it written for? (2)

2. Give two main reasons why the world's temperature is rising. (2)

3. According to the report, who must do what to solve the problem? (2)

Read and compare the report Is it Time to Ban Cars from City Centres? Then answer questions 4–6.

1. Tick the feature that does not describe both texts: (1)

- | | | | | | |
|---------------|--------------------------|---------------|--------------------------|--------------|--------------------------|
| a. Impersonal | <input type="checkbox"/> | c. Persuasive | <input type="checkbox"/> | e. Organised | <input type="checkbox"/> |
| b. Factual | <input type="checkbox"/> | d. Personal | <input type="checkbox"/> | | |

2. What is the common theme and purpose in both texts?

(2)

3. Based on the facts presented in these texts, what can you do now to help? (1)

Writing (5)

Q.1.b. Write a balanced argument.

1. List the points 'for' and 'against' the following topic.

Has social media improved human communication?

For	Against

2. Plan a balanced argument. Explain the pros and cons of Social Media Communication in this era.

- Introduce the topic in an interesting way.
- Give facts both for and against the topic.
- Conclude with a summary of the argument and your view based on the evidence.

Q.2.a. Read the first episode of the Manga 'The eccentric CEO.' Dr. Hazel is an esteemed doctor who gave up her dreams for her parents' care. She now attends a boy who does not allow anyone else's company except his famous father. Would she be able to treat Jason's problem. Then answer the following questions given below:

1. From the text, give an example of a simple sentence and a compound sentence. **(2)**

2. Why was Doctor angry after entering in her cabin? **(1)**

3. What suggests that Jason was cooperative to Dr. Hazel for his treatment? Support your answer with an evidence. **(2)**

4. Make notes on the character profile of Dr. Hazel. **(2)**

a. Her appearance – _____

b. Her nature - _____

5. List two features of Manga. **(2)**

Report Gives Strong Climate Change Warning

NEK EDITORS - OCTOBER 16, 2018

A group of scientists from the United Nations (UN) have warned that the world must take strong action right away in order to avoid many serious effects of climate change.

Since people first began burning coal to run factories, the world's temperature has gone up by 1 degree Celsius (C). One degree may not sound like much, but it's enough to cause serious long-term changes in weather patterns that affect all life on earth. This is climate change.

The higher temperatures change weather patterns and bring more extreme weather. Now scientists are trying to figure out how to limit future temperature increases.

As humans burn "fossil fuels" like coal, oil, and natural gas to make energy, the world gets hotter. Burning fossil fuels adds carbon dioxide (CO₂) and other pollution to the air. The more CO₂, the more the Earth heats up.

In 2015, the world's countries signed the "Paris Agreement" to work together to slow global warming. The Paris Agreement set goals for countries to pollute less by replacing fossil fuel energy with energy that doesn't pollute, such as solar, wind, and water power.

Q.1.a.

Nations Unies Conférence sur les Changements Climatiques 2015

CP/21/CMP.11

This picture was taken after all 196 countries agreed to the Paris Agreement.

For most governments, the goal of the Paris Agreement was to limit the rise in the Earth's temperature to 2°C. When people talk about these 2°, it's important to remember that 1° is already used up by the temperature change humans have already caused.

So the Paris Agreement was really trying to keep the Earth from getting 1 degree warmer than it is now. Most countries are not doing what they need to do to meet that agreement.

Now a group of over 90 scientists from 40 different countries have created a report showing that the world will be much better off if we can limit global warming to 1.5°C (0.5° warmer than now). They warn that the world will reach this temperature in about 12 years unless all countries work together to solve the problem.

The effects of climate change can already be seen around the world. Ice is melting in the Arctic and Antarctic. Higher temperatures have led to heat waves, record dry periods, wildfires, record rains, and more strong hurricanes.

Map of Africa showing drought regions. Droughts – long periods without rain – are one effect of climate change. Other effects include wildfires, record rains, and strong hurricanes. This picture shows drought conditions in southern Africa in 2016.

The differences between the world's temperature rising 0.5°C and 1°C are big. Both cases are bad – seas will rise, coasts will be flooded, heatwaves will get worse, many kinds of animals will die out, and millions of people will be left without food or water. But if the temperature is allowed to go up 1°C instead of just 0.5°C, things will be much, much worse.

The report says that it is possible for the world to meet the lower goal. But to do so, *all governments* around the world will have to work together in ways they have not done before. To reach the goal, the world will need to quickly move to energy that does not give off CO₂. This is the hardest part, since today's world depends greatly on energy from fossil fuels.

CO₂ will also need to be removed from the air. This can be done now, but it costs a lot of money and doesn't work very well. The world will need to plant huge areas of trees, which will also help remove CO₂.

The biggest challenge will be forcing governments to take action quickly.

To reach the goal, the world needs to use energy that does not give off CO₂. This is hard, since the world today depends greatly on energy from fossil fuels. This picture shows a coal-burning power plant in China.

What Can You Do?

Climate change is such a big problem that many people wonder if anything they do can really make a difference. While the big decisions may be made by governments, people can get together and try to make sure their government takes strong action.

But the decisions that people make in their everyday lives also add up. Here are some steps you can take if you want to help limit climate change:

- **Eat less meat** – raising animals for food is very hard on the planet
- **Walk or bike instead of driving**
- **Take a bus or train instead of flying** – airplanes create huge amounts of pollution
- **Use less electricity**; if possible try to make sure your electricity is from renewable energy
- **Reuse more; buy and use less** – fewer new products = less waste and less pollution

Is it time to ban cars from city centres?

Air pollution is a serious issue and it affects us all directly. Action may be needed to reduce air pollution created by the traffic on our roads.

Over the past few decades a significant increase in the number of cars on the road has resulted in more carbon dioxide emissions. Scientists are warning that high levels of CO₂ in the atmosphere cause the earth to heat up. As a result, we are experiencing more extreme weather patterns. In addition, air pollution in cities causes health problems like asthma. A ban on cars in city centres would therefore reduce air pollution and also improve traffic jams and health issues.

On the other hand, such a ban could create other problems. In some cities, public transport is expensive, unreliable or non-existent. In addition, public transport systems would need to be upgraded to cope with greater demand; this requires time and money. Furthermore, personal choice is an issue. For example some people enjoy using public transport but others feel safer in their cars than on a bus or a train. Hence, they may object to being forced to use another mode of transport.

While there is clearly an urgent need to reduce air pollution, we could achieve this in a number of ways. Rather than banning cars in cities, people could be made aware of the issues and encouraged to use less fuel and make use of public transport where possible.

Q.2.a.

1

2

ANXIOUS

3

DR HAZEL, YOU'RE FINALLY HERE!

GLANCE

4

WHAT A SPECTACLE...

5

EVERYONE, PLEASE WAIT IN THE WAITING AREA. TOO MUCH COMMOTION GOING ON.

7

8

MY OFFICE...

9

6

THE NURSES ON DUTY WILL BE AFFECTED.

HELLO, WHAT IS YOUR NAME? HOW ARE YOU FEELING?

10

11

MY DEAR, DOCTORS CAN'T READ YOUR MIND. WE WON'T KNOW WHAT'S HAPPENING LOOKING AT YOUR FACE. IF YOU DON'T WISH TO SPEAK, HOW ABOUT POINTING OUT WHERE YOUR DISCOMFORT IS?

12

.....

13

YOUR TUMMY DOESN'T FEEL WELL?

17

OUR YOUNG MASTER IS WARMING UP TO A STRANGER?!

I WAS HIS BUTLER FOR 5 YEARS, AND HE WOULDN'T EVEN LET ME HUG HIM...

WE'RE HERE, MASTER.

14

16

LET ME TAKE YOU THROUGH THOROUGH CHECKUP.
